Curious Quick Setup Guide

Setup is fairly straight forward.

1. Upload the **Curious** folder via FTP to the wp_content > themes folder.

2.   Login in your WordPress admin area.

3. Go to the **Design** tab and select the **Curious** theme.

Press "Activate **Curious**" link in upper right corner of window.

Notes:

1. If the **Tag Cloud** does not appear to be working…make sure that you have a few tags associated with your posts. I worked on that one for an hour like a numbskull before I figured out that I had no tags in any of the test posts.

That's it! Remember you can always see a demo here: [Curious Demo](#)
